 >100:1 – pre-renal cause
 <40:1 – intrinsic renal damage

Clinical Use

Kidney function test (KFT) results are not diagnostic but rather indicate that there may be a problem with the kidneys and that further testing is required to make a diagnosis and determine the cause. Results of the panel are usually considered together, rather than separately. Individual test result can be abnormal due to causes other than kidney disease, but taken together with risks and/or signs and symptoms, they may give an indication of whether kidney disease is present.

IMPORTANT INSTRUCTIONS

* Test results released pertain to the specimen submitted. All test results are dependent on the quality of the same received by the laboratory. Laboratory investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the referring physician. Report delivery may be delayed due to unforeseen circumstances. Inconvenience is regretted. Test results may show interlaboratory variations. The courts forum at Ghaziabad shall have exclusive jurisdiction in all disputes/claims concerning the tests & or results of tests; test results are not valid for medico-legal purposes.

* Not in NABL Scope

Disclaimer: This is an electronically validated report, if any discrepancy found should be confirmed by user. This test was performed at HPRIME LABS PVT. LTD. This report is not valid for medicolegal purposes. Hprime Lab will not be responsible for report which does not have QR codes.
