Patient Name: RISHA KUMARI		Age/Sex: 7 Y/F
Study ID: MIBG-D-51-2368-23	UHID: 106792980	Date: 25.10.2023

¹²³I-MIBG WHOLE BODY SCAN

Indication: C/o metastatic neuroblastoma.

Findings:

- Mild focal area of increased radiotracer uptake seen on the right side of skull
- Focal area of increased radiotracer uptake seen on the left side of neck
- Physiological radiotracer distribution seen in the salivary glands, myocardium, liver and urinary bladder.
- No other focus of abnormal uptake noted in the rest of the body.

SPECT-CT:

- MIBG accumulating enlarged ¹²³I-labelled left cervical lymph nodes, level II-V noted, largest measuring ~1.9x1.3 cm at left cervical level
- Lytic lesion noted in the left scapula with no significant MIBG tracer accumulation

IMPRESSION:

- MIBG concentrating left cervical lymph nodes and right dural lesion as described above- residual disease.
- As compared to previous study (MIBG-50-2342-23, dated 10.08.2023), there is resolution of skeletal and marrow lesions, decrease in size of cervical lymph nodes and decrease in uptake of meningeal metastases- suggestive of partial response.
